Next Two Weeks Model Guidance

Summary

July 1 - 4

- Less hot than recently but warmer than average, except closer to seasonal in Scotland & Northern Ireland.
- Drier than normal in most areas, but occasional showers / isolated thunderstorms are possible.
- Wetter and occasionally windy in the northern UK, esp W Scotland (near seasonal rainfall).

July 5 - 9

- High pressure likely to rebuild from the SE with heat strengthening across England & Wales especially.
- High temperatures above 30 deg C in places, particularly Cent, S & E areas of the UK.
- Warmer than normal elsewhere as well.
- Mostly drier than average but still occasional rain in northern areas, particularly W Scotland & N Ireland.

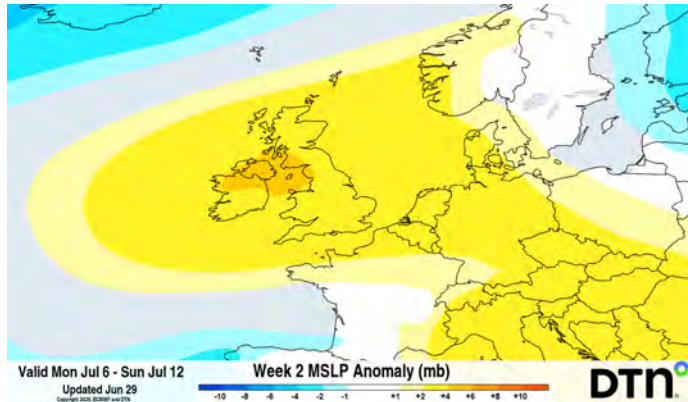

July 10 – 14

- Less warm for a while and more changeable but still above average, or even well above in parts of the south.
- Wetter than normal across Scotland. Near seasonal or below rainfall most other regions but thunderstorm risks, especially in the south.

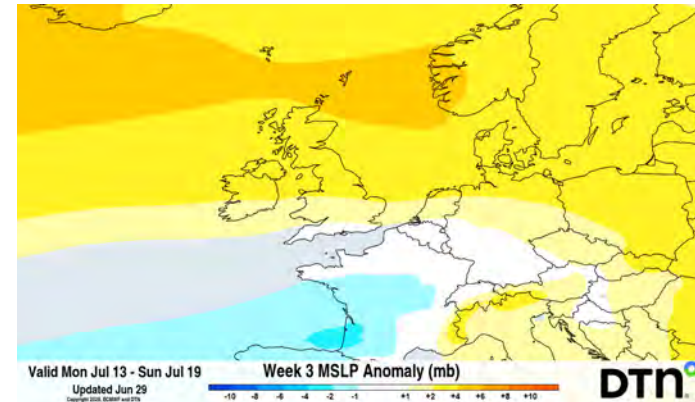

Sub-seasonal Outlook: Model Guidance

ECMWF - Surface Pressure Anomalies

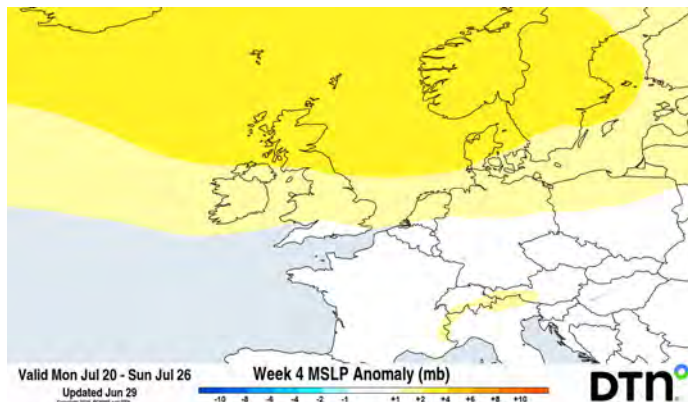

July 6 - 12

July 13 - 19

July 20 - 26

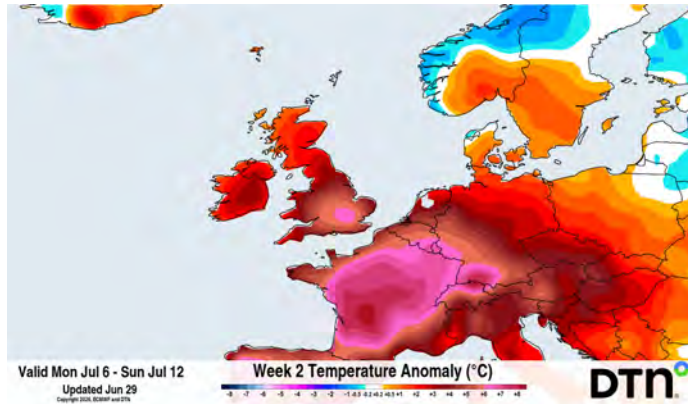

- High pressure will be dominant.
- Strong anomalies should build over the UK.
- High pressure anomalies could shift N'wards.
- Temperatures consistently above or well-above average.
- Mostly drier than normal.

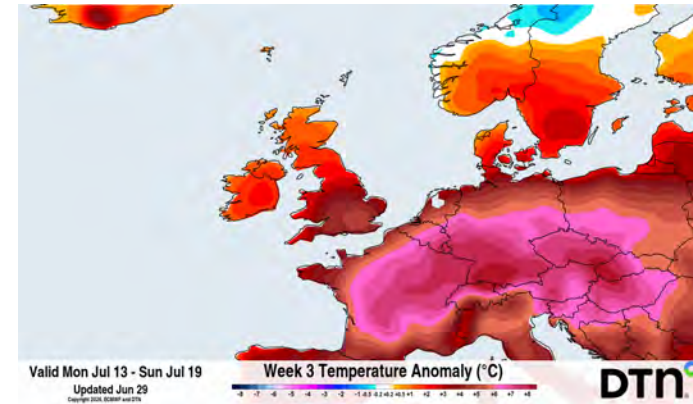

Sub-seasonal Outlook: Model Guidance

ECMWF – Temperature Anomalies

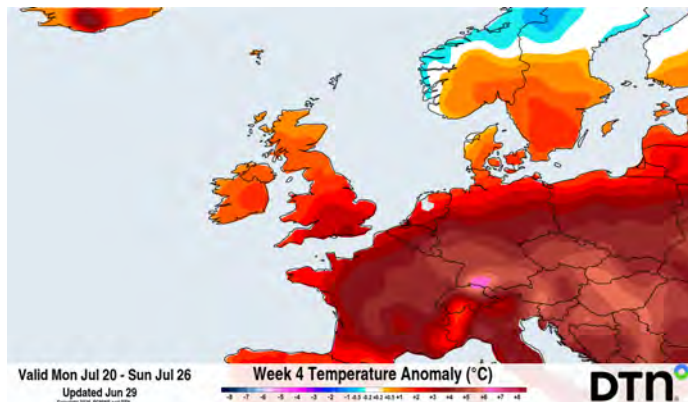

July 6 - 12

July 13 - 19

July 20 - 26

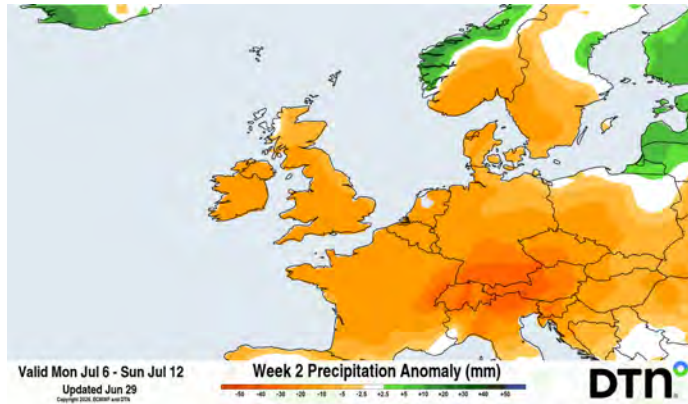

- Strong warmth should build again. Above-average all areas.
- Excessive heat probable, especially Cent, S & E England.
- Highest temperatures could be well into the 30s C.
- Becoming less hot mid to late-July...
...but most likely remaining above normal.

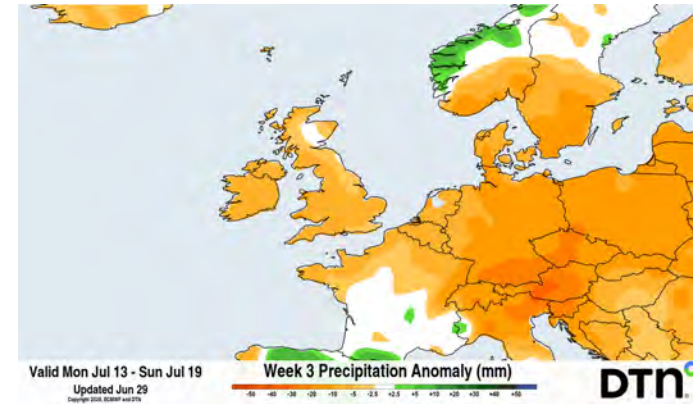

Sub-seasonal Outlook: Model Guidance

ECMWF – Precipitation Anomalies

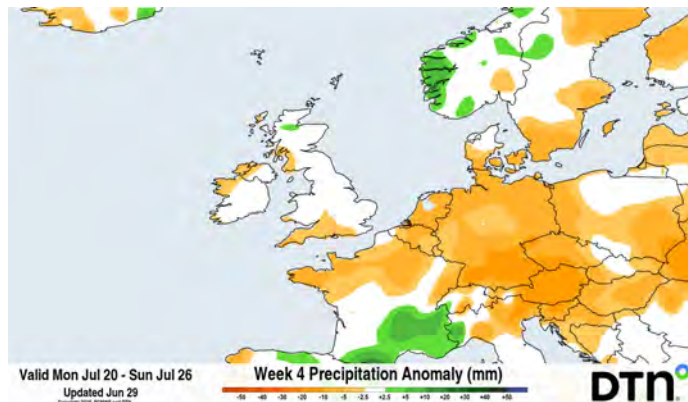

July 6 - 12

July 13 - 19

July 20 - 26

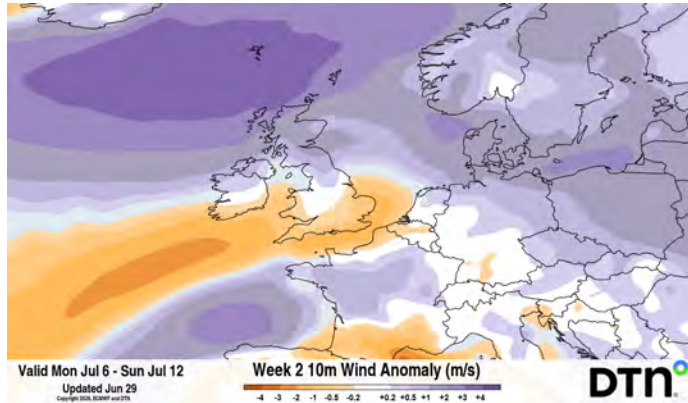

- Mostly drier than average across the UK through to mid-July.
- Wetter at times in parts of Scotland (locally seasonal rainfall).
- Elsewhere, occasional localised thunderstorm chances.
- Rainfall could increase seasonably mid to late June as temperatures ease.
- Increasing risks of thunderstorms / locally heavy rain mid to late June.

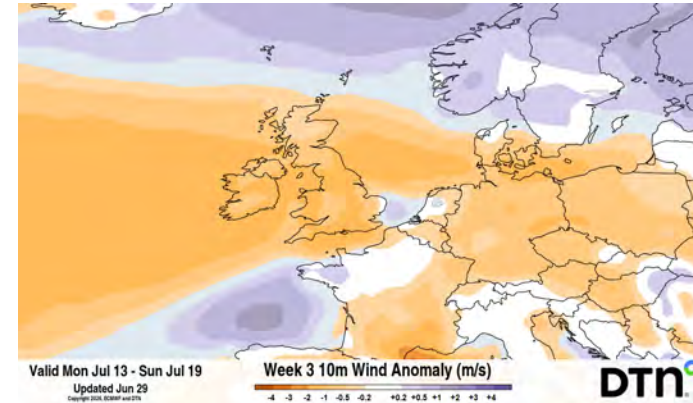

Sub-seasonal Outlook: Model Guidance

ECMWF – Wind Speed Anomalies

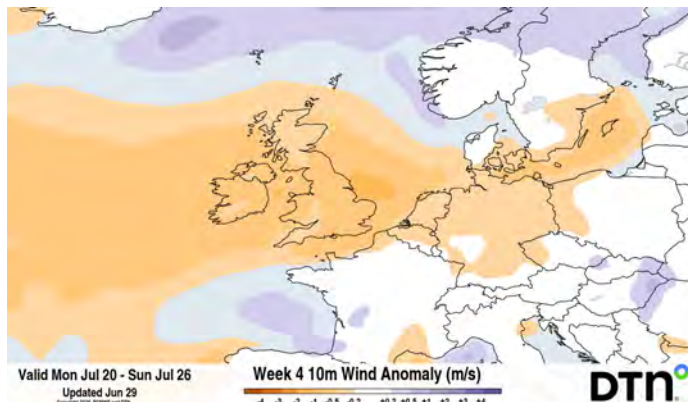

July 6 - 12

July 13 - 19

July 20 - 26

- Before mid-July, above average winds for the N half of the UK.
- Less wind in the south.
- With high pressure dominating, calmer in all areas by mid-July and into the second half of the month.
- Widely below-average winds overall.
- Occasional increases, particularly in the south/southeast...
- ...and temporary gusty winds near any thunderstorms.
